

# Project: KitabGhar – eBook Management System (Online Only)

 **Estimated Duration: 10–14 days (you can pace it flexibly)**

---

## ☒ PHASE 1: Project Setup & Planning (Day 1–2)

### ◇ Task 1: Create an Account on Replit

- Go to <https://replit.com/>
- Sign up with Google or email
- Create a **new Repl**: Choose “Flask (Python)” template

☒ *Outcome:* Your online coding environment is ready.

---

### ◇ Task 2: Plan Core Modules

Write in a Google Doc or Notion (or just on paper):

- User types: Admin, Reader, Author
- Modules: Upload, Browse, Search, Read, User Login
- Technologies: Flask + HTML + SQLite (in Replit)

☒ *Outcome:* You have a clear scope.

---

## ☒ PHASE 2: Build Core Features (Day 3–9)

### ◇ Task 3: Create Home Page + Upload Page (Day 3–4)

- Write `app.py` to handle `/` and `/upload` routes
- Create basic `index.html` and `upload.html` in `templates/`

 I'll give you code for this when you're ready.

☒ *Outcome:* You can upload files (eBooks) to the `uploads/` folder

---

#### ◇ Task 4: Setup SQLite Database (Day 5)

- Create a `models.py` with:
  - User table
  - eBook table (title, file path, author, category)
- Initialize DB in Replit

☒ *Outcome:* Uploaded eBooks are stored and tracked in the database.

---

#### ◇ Task 5: User Login and Registration (Day 6–7)

- Create login and register routes
- Store hashed passwords in the database
- Implement role-based login (Reader / Admin)

☒ *Outcome:* Users can sign up and log in

---

#### ◇ Task 6: Show Uploaded Books with Search (Day 8–9)

- Display list of eBooks on home page
- Add search box for title/author/category
- Allow download or read PDF (using PDF.js or just download link)

☒ *Outcome:* Users can view, filter, and access uploaded books

---

### ☒ PHASE 3: Enhance & Polish (Day 10–14)

---

#### ◇ Task 7: Reader Features (Optional but Nice)

- Add bookmarking, read status
  - Store reading progress in DB
- 

#### ◇ Task 8: Admin Dashboard

- Page for admin to:
  - View all users and uploads
  - Delete or edit books

- See upload stats

---

### ◇ Task 9: UI Styling & Mobile View

- Add CSS in `static/style.css`
- Use Bootstrap or simple responsive design

---

### ◇ Task 10: Hosting and Demo

- Make Replit project public
- Share link with students/colleagues
- Write a short **user guide** in Google Docs

☒ *Outcome:* A complete functional, shareable version of KitabGhar.

---

## ☐ Want Help With Each Step?

I can:

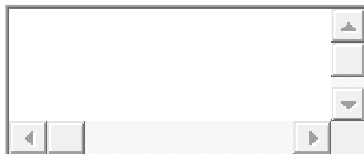

- Write all required code modules for each step
- Help debug any Replit issues
- Guide your students if you involve them

---

## 🚀 Let's Begin:

If you're ready, I'll send you the full code and setup for **Task 3 (File Upload System)** now.  
Should I proceed?
